## 2. MODULE FEATURES

---

- Immediate payment
- Payment in installments with the possibility to offer several options (2, 3, 4 installments, etc.)
- Compatibility with HikaShop version 2.x-4.x
- Multi-language compatibility
- Multi-currency compatibility
- compatible with the commercial version of Hikashop.
- Custom 3D Secure depending on the order amount
- Management of the order status for accepted payments
- Management of the order status for declined payments
- Possibility to enable or disable module logs
- Systematic registration of orders at the end of payment via a silent URL (Instant Payment Notification URL)

### 3. READ CAREFULLY BEFORE GOING ANY FURTHER

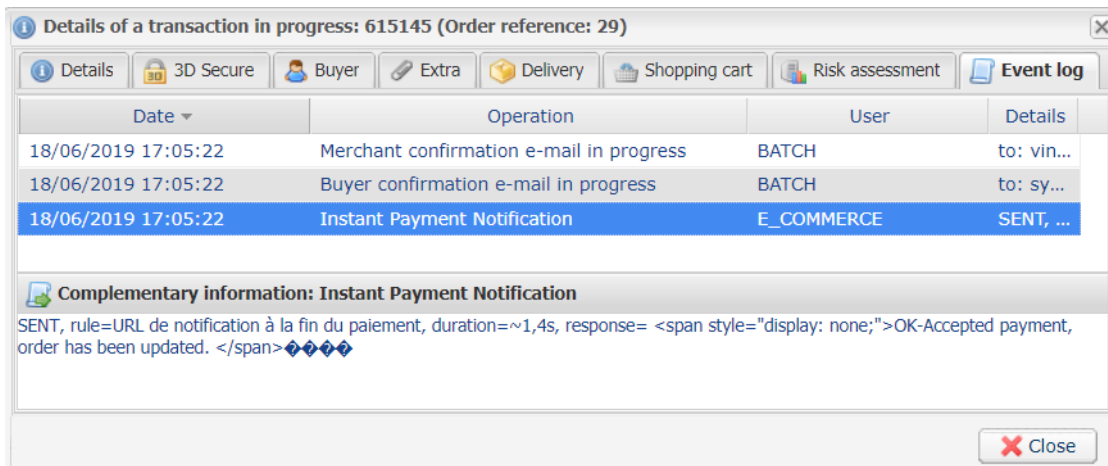

The most frequent error concerns the Instant Payment Notification URL. The Instant Payment Notification URL is the only way the Systempay gateway can notify you at the end of your payment. The chapter **Setting up the end of payment notification** must be read thoroughly and the provided instructions must be respected.

Frequent errors:

- Your HikaShop shop is in maintenance mode
- Your Instant Payment Notification URL is protected by an .htaccess file
- You have blocked the IP addresses of the payment gateway
- You have not encoded the notification URL in the Merchant Back Office

How to check that the Instant Payment Notification URL has been called:

Via the Merchant Back Office, display the payment details (double click), then go to the “**Event log**” tab.

The screenshot shows a window titled "Details of a transaction in progress: 615145 (Order reference: 29)". It contains several tabs: Details, 3D Secure, Buyer, Extra, Delivery, Shopping cart, Risk assessment, and Event log. The Event log tab is active, displaying a table with the following data:

Date	Operation	User	Details
18/06/2019 17:05:22	Merchant confirmation e-mail in progress	BATCH	to: vin...
18/06/2019 17:05:22	Buyer confirmation e-mail in progress	BATCH	to: sy...
18/06/2019 17:05:22	Instant Payment Notification	E_COMMERCE	SENT, ...

Below the table, there is a section titled "Complementary information: Instant Payment Notification" with the following text: "SENT, rule=URL de notification à la fin du paiement, duration=~1,4s, response= <span style='display: none;'>OK-Accepted payment, order has been updated. </span>".

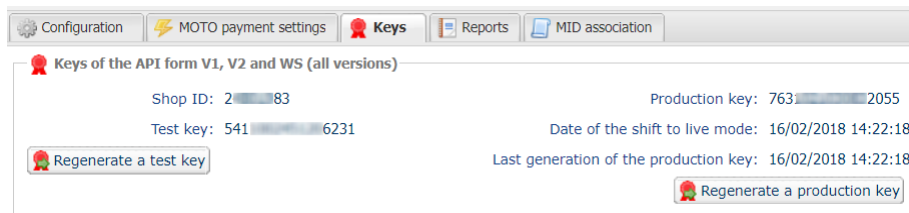

## 4. PREREQUISITES

---

Before integrating the payment module, please make sure that you are in possession of the following elements:

- **Payment module file:** Systempay\_HikaShop\_2.x-4.x\_v2.1.x.zip
- **Your shop ID**
- **Test or production key**

The Shop ID and the keys are available in the Merchant Back Office (menu: **Settings > Shop > Keys**)

The screenshot shows the 'Keys' tab in the Merchant Back Office. The page title is 'Keys of the API form V1, V2 and WS (all versions)'. It displays the following information:

Field	Value
Shop ID	2183
Test key	5416231
Production key	7632055
Date of the shift to live mode	16/02/2018 14:22:18
Last generation of the production key	16/02/2018 14:22:18

There are two buttons: 'Regenerate a test key' and 'Regenerate a production key'.

Reminder, your Merchant Back Office is available at this address:

<https://paiement.systempay.fr/vads-merchant/>

**WARNING:** All our payment modules are tested from a minimal PHP version, this version is visible from our documentary site:

If you have an older version, we invite you to contact the technical manager in charge of your site so that he updates the PHP version of the server. Thus, our support service will be able to assist you if you encounter a problem with our module.

Please note that the 7.0 version is no longer supported by PHP: <http://php.net/supported-versions.php>

## 5. INSTALLATION AND CONFIGURATION OF THE PAYMENT MODULE

---

### 5.1. Updating the module

---

In the case where a previous version of the Systempay module is installed on your shop, you must uninstall it before adding.

**WARNING:** before deleting the payment module, do not forget to save your settings and especially to note the production certificate that is no longer visible in the Back Office.

If you are using version 1.5 or earlier of Joomla, you must manually delete the following files:

vads\_api.php

vads\_configuration.php

vads\_end.php

vads.php

vads.xml

These files are located in the /plugins/hikashoppayment directory .

If you are using version 1.6 or higher of Joomla, connect to your FTP server then delete the vads directory or systempay directory located in /plugins/hikashoppayment. Then proceed to add the new version by following the step described in next chapter.

### 5.2. Adding payment modules

---

The module installs as an extension of Joomla.

From the Joomla Admin Panel, Go to **Extensions> Manage> Installation** and transfer the Systempay\_HikaShop\_2.x-4.x\_v2.1.x.zip file.

To activate the payment method you will have to go to **Extensions> Plug-ins** and look for Systempay:

- **Systempay Payment Plugin** is the one-time payment.
- **Systempay Payment in installments Plugin** is the payment in installments.

Click on the red cross in the Status column to activate the payment method.

### 5.3. Configuring the payment module

---

1. Go to the **Components > Hikashop > Settings** menu.
2. In the general configuration of Hikashop go to **System> Payment Methods**.
3. Click on **New (+)**.
4. The list of payment methods is displayed, click on **Systempay Payment Plugin** for one-time payment or **Systempay Payment in installments Plugin** for payment in installments.

### 5.3.1. General configuration

General configuration	
<b>Published</b>	By clicking yes you activate the payment module.
<b>Images</b>	Define the logo that will be displayed when selecting payment methods. You have the possibility to choose several logos.
<b>Price</b>	By entering a value, you define an additional commission cost.
<b>Percentage</b>	By entering a value, you define a commission percentage.
<b>Tax category</b>	Select a category for the tax, by default no category is selected.

### 5.3.2. One-time payment

Access to the payment gateway	
Shop ID	Indicate the 8-digit shop ID, available in your Merchant Back Office (Menu: <b>Settings &gt; Shop &gt; Keys</b> ).
Test key	Specify the test key available via your Merchant Back Office (Menu: <b>Settings &gt; Shop &gt; Keys</b> ).
Production key	Specify the production key available in your Merchant Back Office (Menu: <b>Settings &gt; Shop &gt; Keys</b> ). Note that the production key will only become available after the test phase has been completed.
Mode	Allows to indicate the operating mode of the module ( <b>TEST</b> or <b>PRODUCTION</b> ). The PRODUCTION mode becomes available only after the test phase has been completed. The TEST mode is always available.
Signature algorithm	Algorithm used to compute the signature of the payment form. The algorithm must be the same as the one configured in the Merchant Back Office ( <b>Settings &gt; Shop &gt; Keys</b> ). If the algorithm is different, the parameter will have to be modified via the Merchant Back Office.
Instant Payment Notification URL	URL to copy in your Merchant Back Office ( <b>Settings &gt; Notification rules &gt; Instant Payment Notification URL at the end of the payment &gt; Instant Payment Notification URL of the API form V1, V2</b> menu). For more information, see the chapter and the sub-chapters on <b>Configuring the notification URL</b> .
Payment page URL	This field is pre-populated by default: <a href="https://paiement.systempay.fr/vads-payment/">https://paiement.systempay.fr/vads-payment/</a>

Payment page	
Default language	This option allows to choose the default language of the payment page in case the language of HikaShop is not supported by Systempay. If the language(s) used by the HikaShop is (are) implemented into Systempay, the payment page will be displayed in the language of HikaShop when the buyer clicks on "Pay".
Available languages	Allows to customize the language displayed on the payment page. The buyer will be able to select a language when he or she is redirected to the payment page. If you do not select any language, all languages will be displayed on the payment page. To select a language, press and hold the "Ctrl" key and click on the desired languages. <u>Available languages:</u> German, English, Chinese, Spanish, French, Italian, Japanese, Dutch, Polish, Portuguese, Russian, Swedish, Turkish.
Capture delay	Indicates the delay (in days) before the capture. By default, this parameter can be configured in your Merchant Back Office (menu: <b>Settings &gt; Shop &gt; Configuration</b> - section: Capture delay). It is recommended to not populate this parameter.
Validation mode	<b>Back Office configuration:</b> Recommended value. Allows to use the configuration defined in the Merchant Back Office (menu: Settings > Shop > Configuration section: validation mode). <b>Automatic:</b> This value indicates that the payment will be captured in the bank automatically without any action on the merchant's part. <b>Manual:</b> This value indicates that the transactions will require manual validation by the merchant via the Merchant Back Office. <b>Warning:</b> if the transaction is not validated by the merchant before the expiration date of the authorization request, it will never be captured in the bank. Remember to configure the <b>Instant Payment Notification rule on an operation coming from the Back Office</b> to update the order status in HikaShop.

Payment page	
Card types	<p>This field allows to select the cards logo to be displayed on the payment page.</p> <p>Warning:</p> <p>The payment types offered to the buyer on the payment page depend on the contracts and options associated with your Systempay offer.</p> <p>It is recommended to leave this parameter empty.</p>
Custom 3DS	
Managing 3DS	<ul style="list-style-type: none"> <li> <b>In 3DS1: Disables</b> the 3DS1 process during an e-commerce payment. Requires the <b>Selective 3DS1</b> option. <div> <p><b>IMPORTANT</b></p> <p><b>This feature will become obsolete as soon as the 3DS1 version is no longer supported by the networks.</b></p> <p><b>As of October 2020, issuers can refuse the transaction if 3D Secure authentication has not been performed.</b></p> <p><b>This behavior is called "Soft Decline".</b></p> <p><b>To reduce the number of rejected payments, the payment gateway automatically makes a new payment attempt with 3D Secure authentication, when possible.</b></p> </div> </li> <li> <b>In 3DS2:</b> Allows to request authentication without interaction (frictionless). Requires the <b>Frictionless 3DS2</b> option. <ul style="list-style-type: none"> <li>For payments made in euro, if the amount is lower than €30, a request for frictionless is transmitted to the DS. <b>If the request for frictionless is accepted by the issuer, the merchant loses the payment guarantee.</b></li> <li>For payments made in euros, if the amount is greater than €30, the value transmitted by the merchant is ignored and the management of cardholder authentication is delegated to the gateway.</li> <li>For payments made in a currency other than euro, a request for frictionless is transmitted to the DS.</li> </ul> </li> </ul>
Return to shop	
Automatic redirection	<p>This option allows to automatically redirect the buyer to the merchant website. This option depends on the following settings.</p> <p>This option is disabled by default.</p>
Time before redirection (success)	If the <b>automatic redirection</b> option is enabled, you can define the delay in seconds before your buyer is redirected to your shop in case of a successful payment.
Message before redirection (success)	<p>If the <b>automatic redirection</b> option is enabled, you can define the message that will appear on the screen following a successful payment before your buyer is redirected to the shop.</p> <p>The default message is:</p> <p>"Redirection to the shop in a moment".</p>
Time before redirection (failure)	If the <b>automatic redirection</b> option is enabled, you can define the delay in seconds before your buyer is redirected to your shop in case of a failed payment.
Message before redirection (failure)	<p>If the <b>automatic redirection</b> option is enabled, you can define the message that will appear on the screen following a failed payment before your buyer is redirected to the shop.</p> <p>The default message is:</p> <p>"Redirection to the shop in a moment".</p>
Return mode	<p>During the redirection to the shop, these parameters are returned to the shop in <b>GET</b> or <b>POST</b> modes.</p> <p>The <b>GET</b> mode is more convenient for the buyer as it allows to prevent the browser from displaying a pop-up window that indicates that the buyer is leaving an https environment for an http environment which obliges the buyer to click on "Accept" to return to the shop.</p>
Order status (payment accepted)	Select the Registered orders status. It is recommended to leave the <b>default</b> value.
Order status (payment declined)	Select the status to apply to failed orders. It is recommended to leave the <b>default</b> value.

Once you have completed the configuration, click **Save**.

### 5.3.3. Installment payment

Access to the payment gateway	
Shop ID	Indicate the 8-digit shop ID, available in your Merchant Back Office (Menu: <b>Settings &gt; Shop &gt; Keys</b> ).
Test key	Specify the test key available via your Merchant Back Office (Menu: <b>Settings &gt; Shop &gt; Keys</b> ).
Production key	Specify the production key available in your Merchant Back Office (Menu: <b>Settings &gt; Shop &gt; Keys</b> ). Note that the production key will only become available after the test phase has been completed.
Mode	Allows to indicate the operating mode of the module ( <b>TEST</b> or <b>PRODUCTION</b> ). The PRODUCTION mode becomes available only after the test phase has been completed. The TEST mode is always available.
Signature algorithm	Algorithm used to compute the signature of the payment form. The algorithm must be the same as the one configured in the Merchant Back Office ( <b>Settings &gt; Shop &gt; Keys</b> ). If the algorithm is different, the parameter will have to be modified via the Merchant Back Office.
Instant Payment Notification URL	URL to copy in your Merchant Back Office ( <b>Settings &gt; Notification rules &gt; Instant Payment Notification URL at the end of the payment &gt; Instant Payment Notification URL of the API form V1, V2</b> menu). For more information, see the chapter and the sub-chapters on <b>Configuring the notification URL</b> .
Payment page URL	This field is pre-populated by default: <a href="https://paiement.systempay.fr/vads-payment/">https://paiement.systempay.fr/vads-payment/</a>

Payment page	
Default language	This option allows to choose the default language of the payment page in case the language of HikaShop is not supported by Systempay. If the language(s) used by the HikaShop is (are) implemented into Systempay, the payment page will be displayed in the language of HikaShop when the buyer clicks on "Pay".
Available languages	Allows to customize the language displayed on the payment page. The buyer will be able to select a language when he or she is redirected to the payment page. If you do not select any language, all languages will be displayed on the payment page. To select a language, press and hold the "Ctrl" key and click on the desired languages. <u>Available languages:</u> German, English, Chinese, Spanish, French, Italian, Japanese, Dutch, Polish, Portuguese, Russian, Swedish, Turkish.
Capture delay	Indicates the delay (in days) before the capture. By default, this parameter can be configured in your Merchant Back Office (menu: <b>Settings &gt; Shop &gt; Configuration</b> - section: Capture delay). It is recommended to not populate this parameter.
Validation mode	<b>Back Office configuration:</b> Recommended value. Allows to use the configuration defined in the Merchant Back Office (menu: Settings > Shop > Configuration section: validation mode). <b>Automatic:</b> This value indicates that the payment will be captured in the bank automatically without any action on the merchant's part. <b>Manual:</b> This value indicates that the transactions will require manual validation by the merchant via the Merchant Back Office. <b>Warning:</b> if the transaction is not validated by the merchant before the expiration date of the authorization request, it will never be captured in the bank. Remember to configure the <b>Instant Payment Notification rule on an operation coming from the Back Office</b> to update the order status in HikaShop.

Payment page	
<b>Card types</b>	<p>This field allows to select the cards logo to be displayed on the payment page.</p> <p>Warning:</p> <p>The payment types offered to the buyer on the payment page depend on the contracts and options associated with your Systempay offer.</p> <p>It is recommended to leave this parameter empty.</p>

Custom 3DS	
<b>Managing 3DS</b>	<ul style="list-style-type: none"> <li> <b>In 3DS1:</b> Disables the 3DS1 process during an e-commerce payment. Requires the <b>Selective 3DS1</b> option.           <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>IMPORTANT</b></p> <p><b>This feature will become obsolete as soon as the 3DS1 version is no longer supported by the networks.</b></p> <p><b>As of October 2020, issuers can refuse the transaction if 3D Secure authentication has not been performed.</b></p> <p><b>This behavior is called "Soft Decline".</b></p> <p><b>To reduce the number of rejected payments, the payment gateway automatically makes a new payment attempt with 3D Secure authentication, when possible.</b></p> </div> </li> <li> <b>In 3DS2:</b> Allows to request authentication without interaction (frictionless). Requires the <b>Frictionless 3DS2</b> option.           <ul style="list-style-type: none"> <li>For payments made in euro, if the amount is lower than €30, a request for frictionless is transmitted to the DS. <b>If the request for frictionless is accepted by the issuer, the merchant loses the payment guarantee.</b></li> <li>For payments made in euros, if the amount is greater than €30, the value transmitted by the merchant is ignored and the management of cardholder authentication is delegated to the gateway.</li> <li>For payments made in a currency other than euro, a request for frictionless is transmitted to the DS.</li> </ul> </li> </ul>

Payment options	
<b>Payment option</b>	<p>This module allows you to create as many credit card installment payment options as you like.</p> <p>Each payment option will have a different code that will be displayed in the order table.</p> <p>To add a payment option, click on <b>Add</b>.</p> <p>When you are done, remember to save your changes.</p>
<b>Label</b>	<p>Text describing the installment payment option as it will be offered to the buyer.</p> <p>Example: Pay in 3 installments with no fees</p>
<b>Minimum amount</b>	<p>Allows to define the minimum amount required to make the payment option available.</p>
<b>Maximum amount</b>	<p>Allows to define the maximum amount required to make the payment option available.</p>
<b>Merchant ID</b>	<p>The Merchant ID to use with the option, in case your shop has several Merchant IDs.</p> <p><b>It is recommended to leave this field empty.</b></p>
<b>Number</b>	<p>Number of installments:</p> <p><b>3</b> for payment in 3 installments</p> <p><b>4</b> for payment in 4 installments</p> <p>etc.</p>
<b>Period</b>	<p>Period (in days) between each installment.</p>
<b>First installment</b>	<p>Amount of the first installment, expressed as a percentage of the total amount.</p> <p>Example:</p> <p>For an amount of EUR 100 in 3 installments, you can set the percentage of the first payment at 50% of the amount. This means that the amount of the first installment will be EUR 50 and that the two</p>

Payment options	
	<p>others will be of EUR 25.</p> <p>For 50% enter <b>50</b>.</p> <p>If you want the amount of every installment to be the same, leave this field empty.</p>

Return to shop	
<b>Automatic redirection</b>	<p>This option allows to automatically redirect the buyer to the merchant website. This option depends on the following settings.</p> <p>This option is disabled by default.</p>
<b>Time before redirection (success)</b>	<p>If the <b>automatic redirection</b> option is enabled, you can define the delay in seconds before your buyer is redirected to your shop in case of a successful payment.</p>
<b>Message before redirection (success)</b>	<p>If the <b>automatic redirection</b> option is enabled, you can define the message that will appear on the screen following a successful payment before your buyer is redirected to the shop.</p> <p>The default message is: "Redirection to the shop in a moment".</p>
<b>Time before redirection (failure)</b>	<p>If the <b>automatic redirection</b> option is enabled, you can define the delay in seconds before your buyer is redirected to your shop in case of a failed payment.</p>
<b>Message before redirection (failure)</b>	<p>If the <b>automatic redirection</b> option is enabled, you can define the message that will appear on the screen following a failed payment before your buyer is redirected to the shop.</p> <p>The default message is: "Redirection to the shop in a moment".</p>
<b>Return mode</b>	<p>During the redirection to the shop, these parameters are returned to the shop in <b>GET</b> or <b>POST</b> modes.</p> <p>The <b>GET</b> mode is more convenient for the buyer as it allows to prevent the browser from displaying a pop-up window that indicates that the buyer is leaving an https environment for an http environment which obliges the buyer to click on "Accept" to return to the shop.</p>
<b>Order status (payment accepted)</b>	<p>Select the Registered orders status. It is recommended to leave the <b>default</b> value.</p>
<b>Order status (payment declined)</b>	<p>Select the status to apply to failed orders. It is recommended to leave the <b>default</b> value.</p>

Once you have completed the configuration, click **Save**.

### 5.3.4. Restrictions

Restrictions	
<b>Area</b>	You can restrict the payment method to a zone. By clicking on the edit icon, a window opens allowing you to select a zone. You can also remove this restriction by clicking the delete icon.
<b>Shipping mode</b>	With this option, you can choose the delivery method for which this payment method will be available. For example, if you choose UPS, this payment method will only be used if UPS is selected as the delivery method. Note: If you have selected <b>None</b> , or if you do not choose any shipping method, this payment method will still be available.
<b>Currency</b>	Choose the currencies allowed by this payment method.
<b>Minimum price</b>	This field defines the minimum amount for which you wish to offer this payment method. By defining a minimum amount for, the payment method will not be enabled for users with a smaller shopping cart amount.
<b>Maximum price</b>	This field defines the maximum amount for which you wish to offer this payment method. By setting a maximum amount, the payment method will not be offered to all users who own a basket with a higher amount.
<b>Tax</b>	In selecting yes, the payment method is only displayed for products with taxes.
<b>Minimum quantity</b>	You can set a minimum quantity. If the orders are below this quantity, the user will not be able to pay with the payment method.
<b>Maximum quantity</b>	You can define a maximum quantity. If the orders are above this quantity, the user will not be able to pay with the payment method.
<b>Minimum weight</b>	You can set a minimum weight. If the orders are below this weight, the user will not be able to pay with the payment method. The weight of the order will be calculated on the basis of the weight of each of the products it contains.
<b>Maximum weight</b>	You can set a maximum weight. If the orders are above this weight, the user will not be able to pay with the payment method. The weight of the order will be calculated on the basis of the weight of each of the products it contains.
<b>Minimum volume</b>	You can set a minimum volume. If the orders are below this volume, the user will not be able to pay with the payment method. The volume of the order will be calculated on the basis of the volume of each of the products it contains.
<b>Maximum volume</b>	You can set a maximum volume. If the orders are above this volume, the user will not be able to pay with the payment method. The volume of the order will be calculated on the basis of the volume of each of the products it contains.
<b>Prefix</b>	You can restrict the payment method for postal codes, including as a prefix with this option.
<b>zip code minimum</b>	You can restrict the payment method for postal codes within a certain range where it is the minimum possible value.
<b>zip code maximum</b>	You can restrict the payment method for postal codes within a certain range where it is the maximum possible value.
<b>Suffix</b>	You can restrict the payment method for postal codes, including as a suffix with this option.

## 6. SETTING UP THE INSTANT PAYMENT NOTIFICATION URL

The Merchant Back Office provides several types of notifications. They allow to manage the events that will generate a call to the merchant website and to configure the URL of the contact page.

To access notification rule management:

1. Sign in to: <https://paiement.systempay.fr/vads-merchant/>.
2. Go to the following menu: **Settings > Notification rules.**

Instant Payment Notification		<input checked="" type="checkbox"/> E-mail sent to the merchant	<input checked="" type="checkbox"/> E-mail sent to the buyer
Enabled	Reference		
✗	Instant Payment Notification URL on batch authorization		
✓	Instant Payment Notification URL at the end of the payment		
✗	Instant Payment Notification URL on batch change		
✗	Instant Payment Notification URL on cancellation		
✗	Instant Payment Notification URL on an operation coming from the Back Office		

Figure 1: Notification rules

**Right click > Enable the rule** if a red cross appears in the **Enabled** column of the following rules:

- Instant Payment Notification URL at the end of the payment
- Instant Payment Notification URL on cancellation

## 6.1. Setting up the Instant Payment Notification

---

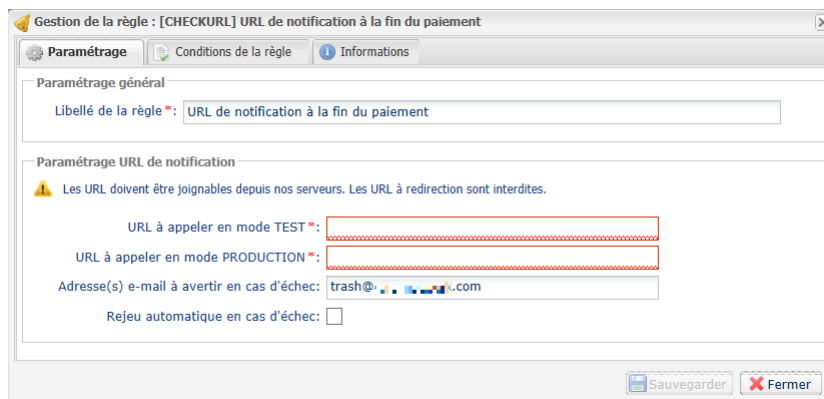

This notification is required to communicate the result of a payment request.

In your Merchant Back Office, you must set up a URL that will be systematically called after a payment. It will inform the merchant website of the payment result even if your client has not clicked on return to the shop.

This parameter is called Instant Payment Notification URL at the end of the payment.

To set up this notification:

1. Right-click **Instant Payment Notification URL at the end of the payment**.
2. Select **Manage the rule**.
3. Enter the URL of your page in the fields **URL to call in TEST mode** and **URL to call in PRODUCTION mode**.

4. Enter the **E-mail address(es) to notify in case of failure**.
5. To specify several e-mail addresses, separate them with a semi-colon.
6. Set up the parameters for **Automatic retry in case of failure**.

This option allows to automatically send notifications to the merchant website in case of failure (up to 4 times).

For more information, see chapter **Activating the automatic retry**

7. Save the changes.

## 6.2. Setting up notifications in case of abandoned or canceled payments

---

The payment gateway can systematically notify the merchant website:

- When the buyer abandons/cancels a payment - via the **Cancel and return to shop** button.
- When the buyer has not completed the payment and the payment session has expired.

**The maximum length of a payment session is 10 minutes.**

To set up this notification:

1. Right-click **Instant Payment Notification URL on cancellation**.
2. Select **Manage the rule**.
3. Enter the URL of your page in the fields **URL to call in TEST mode** and **URL to call in PRODUCTION mode**.
4. Enter the following URL in the fields **URL to call in TEST mode** and **URL to call in PRODUCTION mode (Notification URL of the Hosted payment page V1, V2 section)**: `http://www.mon-domaine.fr/index.php?option=com_hikashop&ctrl=checkout&task=notify&notif_payment=systempay&tmpl=component`
5. Enter the **E-mail address(es) to notify in case of failure**.
6. To specify several e-mail addresses, separate them with a semi-colon.
7. Set up the parameters for **Automatic retry in case of failure**.  
This option allows to automatically send notifications to the merchant website in case of failure (up to 4 times).
8. Save the changes.
9. Once again, right-click **Instant Payment Notification URL on cancellation**
10. Select **Enable the rule**.

## 6.3. Testing the Instant Payment Notification URL

---

In order to make sure that the Instant Payment Notification functions correctly, follow these steps:

1. Make sure that your URL is available online: your shop must neither be **in maintenance mode** nor be protected by an .htaccess file.
2. Make sure that your notification URL is available without any redirection.
  - a. To do this, paste your notification URL to the address bar of your browser and launch the search.
  - b. Make sure your URL did not change.

If your URL has changed, for example from "*http*" to "*https*" or "*http://abc.net*" to "*http://www.abc.net*", it means a redirection is active on your website. Then, copy the URL from the address bar and modify the URL filled in the configuration of all notification rules.
3. Make sure that the "Automatic redirection" option is disabled in the payment module settings.
4. Check that the **Instant Payment Notification URL at the end of payment** is populated in the Merchant Back Office (see above).
5. Make an order on your website and proceed to payment.
6. **Do not click on** "Return to shop" at the end of payment and close the current tab of your browser.
7. In the **Components > Hikashop > Orders** menu, make sure that the status of your order is **Confirmed**.

If the order status remains **Created**, the call has failed.

## 7. PROCEEDING TO TEST PHASE

Before the shop goes into production, it is necessary to carry out tests to ensure that the merchant website and the payment gateway are working properly.

The test payment requests must:

- contain the **vads\_ctx\_mode** field set to **TEST**
- use the **test key** for signature computation

Different cases of payments can be simulated by using test card numbers specified on the payment page. The Merchant will be able to test all 3D Secure authentication results (if the Merchant is enrolled and 3DS is not disabled).

The list of tests to be performed to generate the production key is provided in the Merchant Back Office, **Settings > Shop > Keys** menu.

Tests control

Here is a summary of the tests performed up to now.  
You must perform a valid payment for each row in the table below.

- \* manual payments are not taken into account ;
- \* test payments are deleted after 30 days ;
- \* the **vads\_page\_action** parameter must be set to **PAYMENT** or **REGISTER\_PAY**.

CB	Mastercard	Maestro	Visa Electron	Payment date	Test status
4970100000000014	59701003000000018	50005500000000029	49174800000000008		✗
4970100000000055	59701003000000067	50005500000000052	49174800000000057		✗
4970100000000063	59701003000000075	50005500000000060	49174800000000065		✗
4970100000000071	59701003000000083	50005500000000078	49174800000000073		✗

Refresh the table

The "Generate the production key" button below will become operational once you have successfully completed all the required tests.  
Click on the Refresh the table button to update the test progress.

Generate production key

Each row of the list contains card numbers associated with the same scenario (i.e. 2 accepted payments and 2 refused payments).

Each column corresponds to a different card type: CB/VISA, MASTERCARD, MAESTRO, VISA ELECTRON.

To perform the test phase:

1. Make an order on your merchant website as if you were one of your buyers.
2. Once redirected to the payment page, select the card type of your choice.
3. Refer to the list of tests to identify the card number to use.
4. Once a test has been validated, its status is updated on the list. Click the **Refresh the table** button if the status has not been updated automatically.
5. Once the 4 tests have been validated, the **Generate production key** button becomes available.

 Tests control

Here is a summary of the tests performed up to now.  
You must perform a valid payment for each row in the table below.

- \* manual payments are not taken into account ;
- \* test payments are deleted after 30 days ;
- \* the vads\_page\_action parameter must be set to PAYMENT or REGISTER\_PAY.

CB	Mastercard	Maestro	Visa Electron	Payment date	Test status
4970100000000014	5970100300000018	5000550000000029	4917480000000008	03/01/2019 10:53:24	✓

 Refresh the table

All the required tests have been successfully completed. You can now generate the production key by clicking on the below button.

 Generate the production key

6. Click the **Generate production key** button and accept the notification messages that will appear.

The production key is now available.

## 8. SHIFTING THE SHOP TO PRODUCTION MODE

---

After you receive a confirmation e-mail informing you that a key has been generated, you can configure the payment method by following the steps below:

- Retrieve the production key available in the Merchant Back Office (**Settings > Shop > Keys**).
- In the module configuration parameters:
  - Populate the **Production key** field.
  - Switch from TEST to PRODUCTION mode.
  - Save the changes.
- Make sure that you have specified the Instant Payment Notification URL in production mode, as described in the chapter **Setting up the Instant Payment Notification URL**.

Once the production parameters have been configured for your store, we recommend to make a real payment to make sure that your banking contract is functional.

You will then be able to cancel the payment via the Merchant Back Office.

### **Note on the production key:**

For security reasons, this key will no longer be visible as soon as the first transaction in production mode is made in your shop.

### **Note on the TEST mode:**

Once your shop is in production mode, the TEST mode remains available.

To work in test mode, follow the steps below:

- Switch from PRODUCTION to TEST mode.
- Make sure that the **Test key** is correct.
- Save the changes.

## 9. OBTAINING HELP

---

Looking for help? Check our FAQ on our website

<https://paiement.systempay.fr/doc/en-EN/faq/sitemap.html>

For any technical inquiries or if you need any help, contact [technical support](#).

To help us process your requests, please specify your Shop ID in your query (an 8-digit number).

This information is available in the “registration of your shop” e-mail or in the Merchant Back Office (**Settings > Shop > Configuration**).
